Live Tracker

The smart production process monitoring and management solution

Live Tracker is a suite of services and applications designed to facilitate the exchange of information between offices and machines, providing workflow monitoring and management tools. Each module has specific functions that can be adapted to companies' needs.

With Live Tracker, companies can:

- **monitor** work progress **in real time**;
- **centralise** the flow of data between offices and machines;
- **optimise production**, supporting operators and software in the management of operations;
- **import job queues** from external systems (ERP) and export data and reports;
- **improve quality control**, tracking all the steps of the work.

KEY FUNCTIONS

- **Full integration:** it can be used with FKgroup machines fitted with spreading or cutting control software.
- **Adaptability:** it is compatible with new machines and ERP management systems to guarantee maximum performance.
- **Modularity:** choose the modules your company needs, from job management to statistical reports.
- **Web access:** monitor jobs in real time from any device (PC, tablet, smartphone) through the web server.

WHY BUY LIVE TRACKER?

1. It allows you to check the status of all your jobs in real time and in a centralised way, providing accurate information about working times and stages.
2. It reduces downtime and eliminates operator errors machine-side by linking job queues to the programming of the relevant office.
3. It offers advanced tools for the statistical consultation of jobs already carried out, allowing in-depth analysis of production performance.

Live Tracker is ideal for any company that aims to manage production in an organised and efficient way, using FKgroup machinery with compatible software. Its modular structure makes it flexible and customisable based on production needs.
It can be used easily with spreading and cutting software, centralising the job queue and ensuring that the machines perform only authorised operations, with no unauthorised alterations.

Make Software Unicont Software Just Cut Software

LIVE TRACKER MODULES

- **Director:** The main service that coordinates all the system's activities and modules.
- **Micro-ERP:** Client interface that enables efficient management of jobs and data flows.
- **AutoMate:** Automation of file and data transfer, with customisable planning.
